

Experience two innovative systems to approach first ray deformity correction.

# 1ST RAY SOLUTIONS

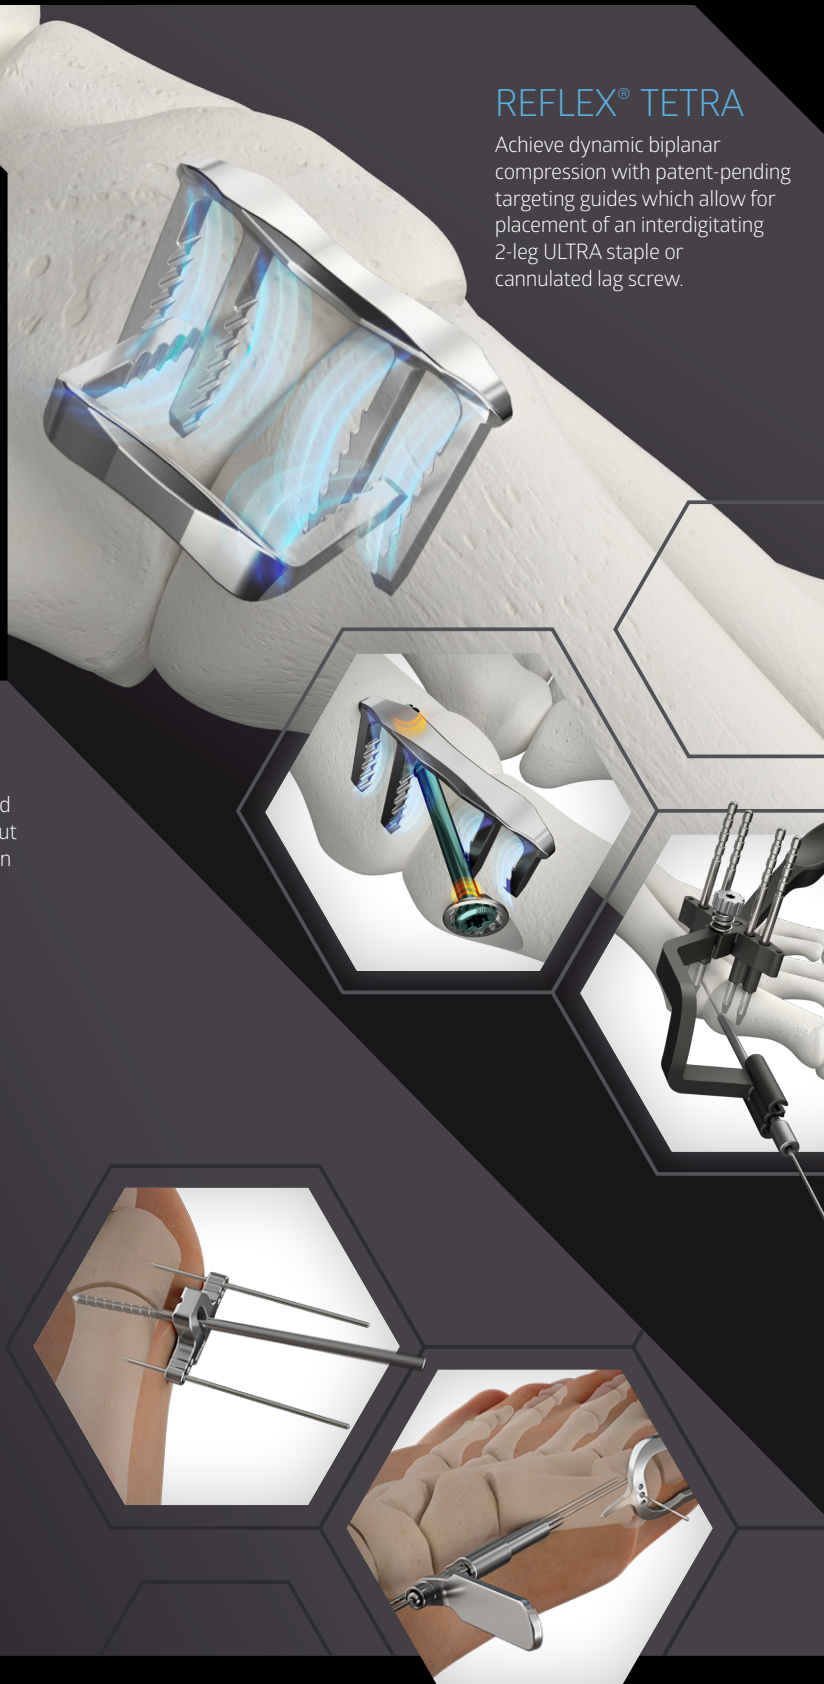

## MIS FOOT RECON SYSTEM

A comprehensive system including partial and fully threaded screws for MIS foot surgery and two plate families for bailout and revision procedures. Achieve stable, reproducible bunion correction through the system's burr cut guide, capital fragment translator, parallel wire guide, and power system.

## REFLEX® TETRA

Achieve dynamic biplanar compression with patent-pending targeting guides which allow for placement of an interdigitating 2-leg ULTRA staple or cannulated lag screw.
